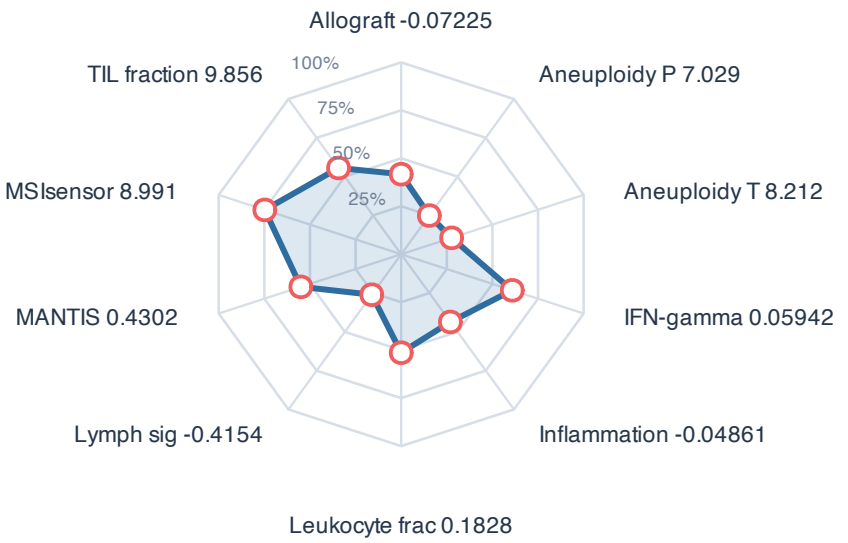
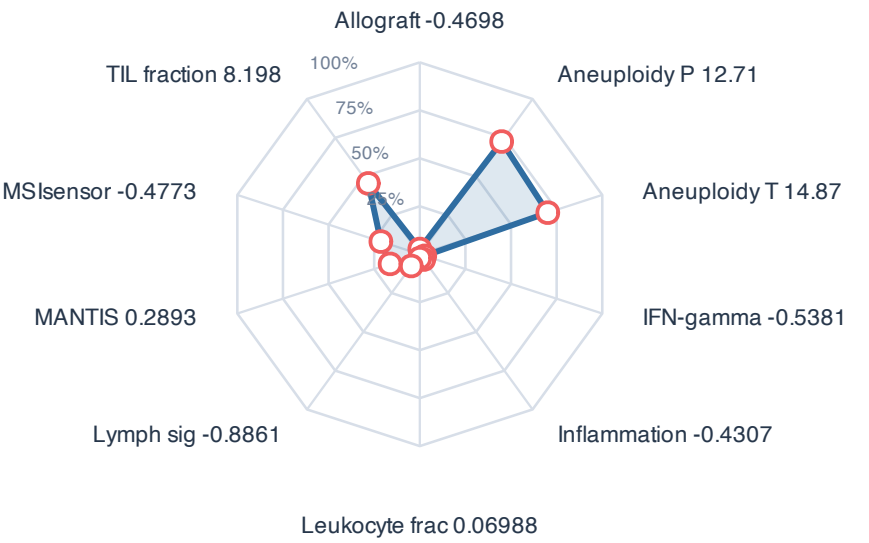
PathoFMPred profiles for two COAD patients across three slide representations

Columns compare patients; rows compare representations. Only the ten continuous endpoints returned by all three models are plotted. Radius is the internal TCGA reference percentile; corner values are original predictions.

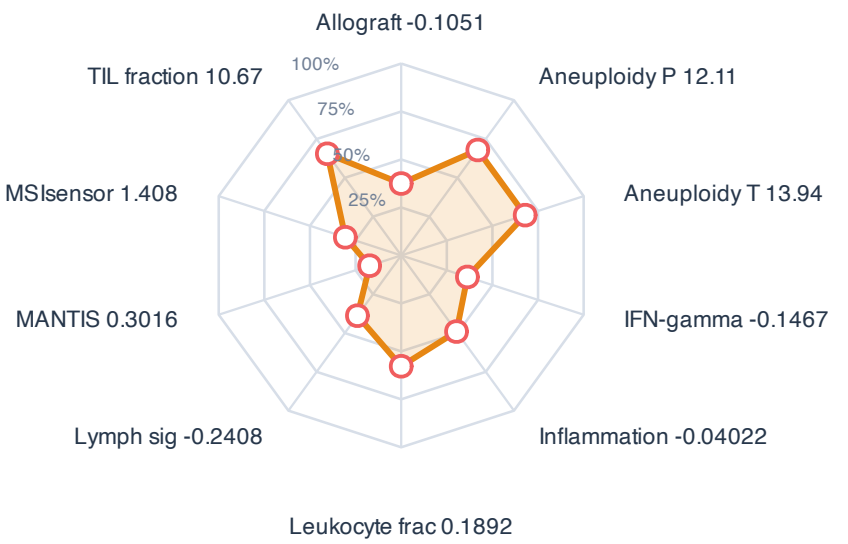
Patient A | TITAN (10 shared endpoints)



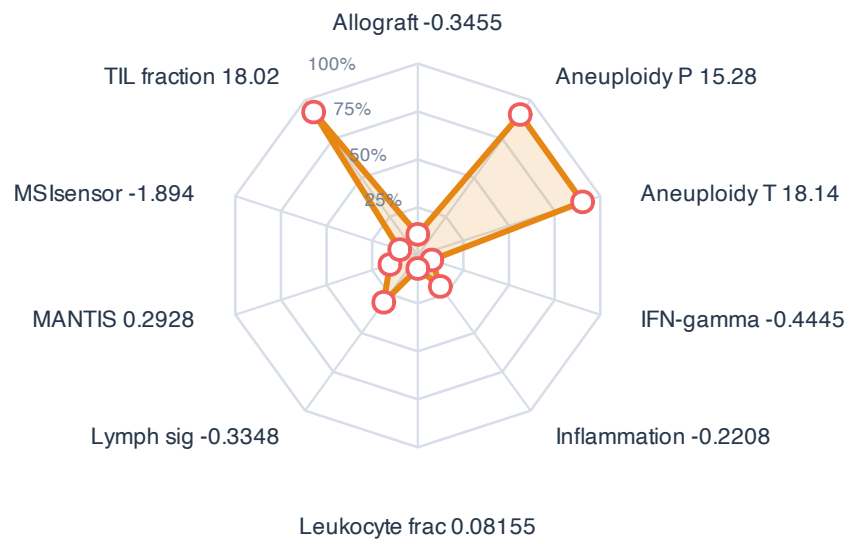
Patient B | TITAN (10 shared endpoints)



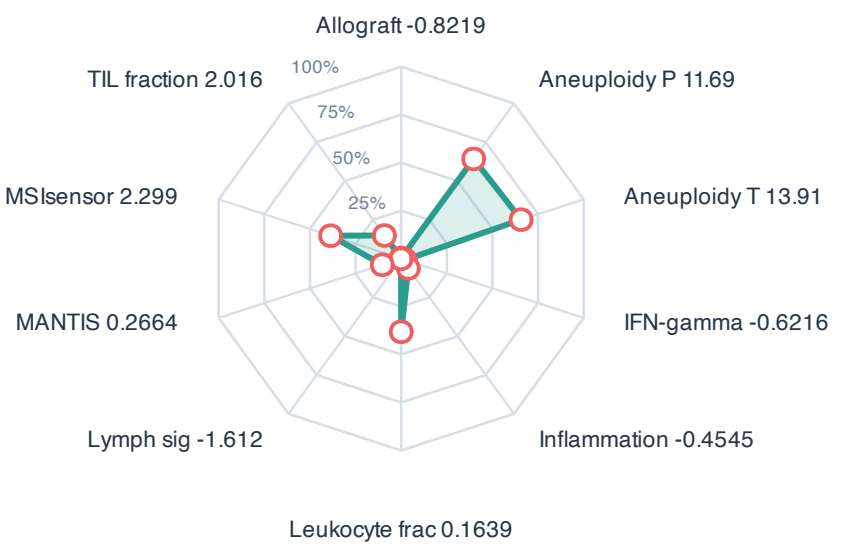
Patient A | Giga-SSL (10 shared endpoints)



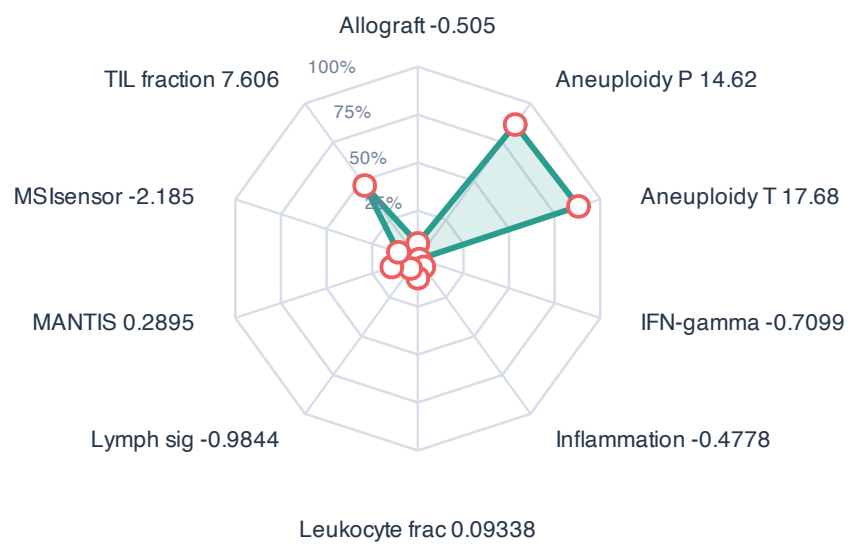
Patient B | Giga-SSL (10 shared endpoints)



Patient A | Prov-GigaPath (10 shared endpoints)



Patient B | Prov-GigaPath (10 shared endpoints)



Every panel has the same endpoints. Patient A is TCGA-AA-A01F; Patient B is TCGA-A6-A56B.
Reference percentiles are not probabilities or clinical reference intervals.
