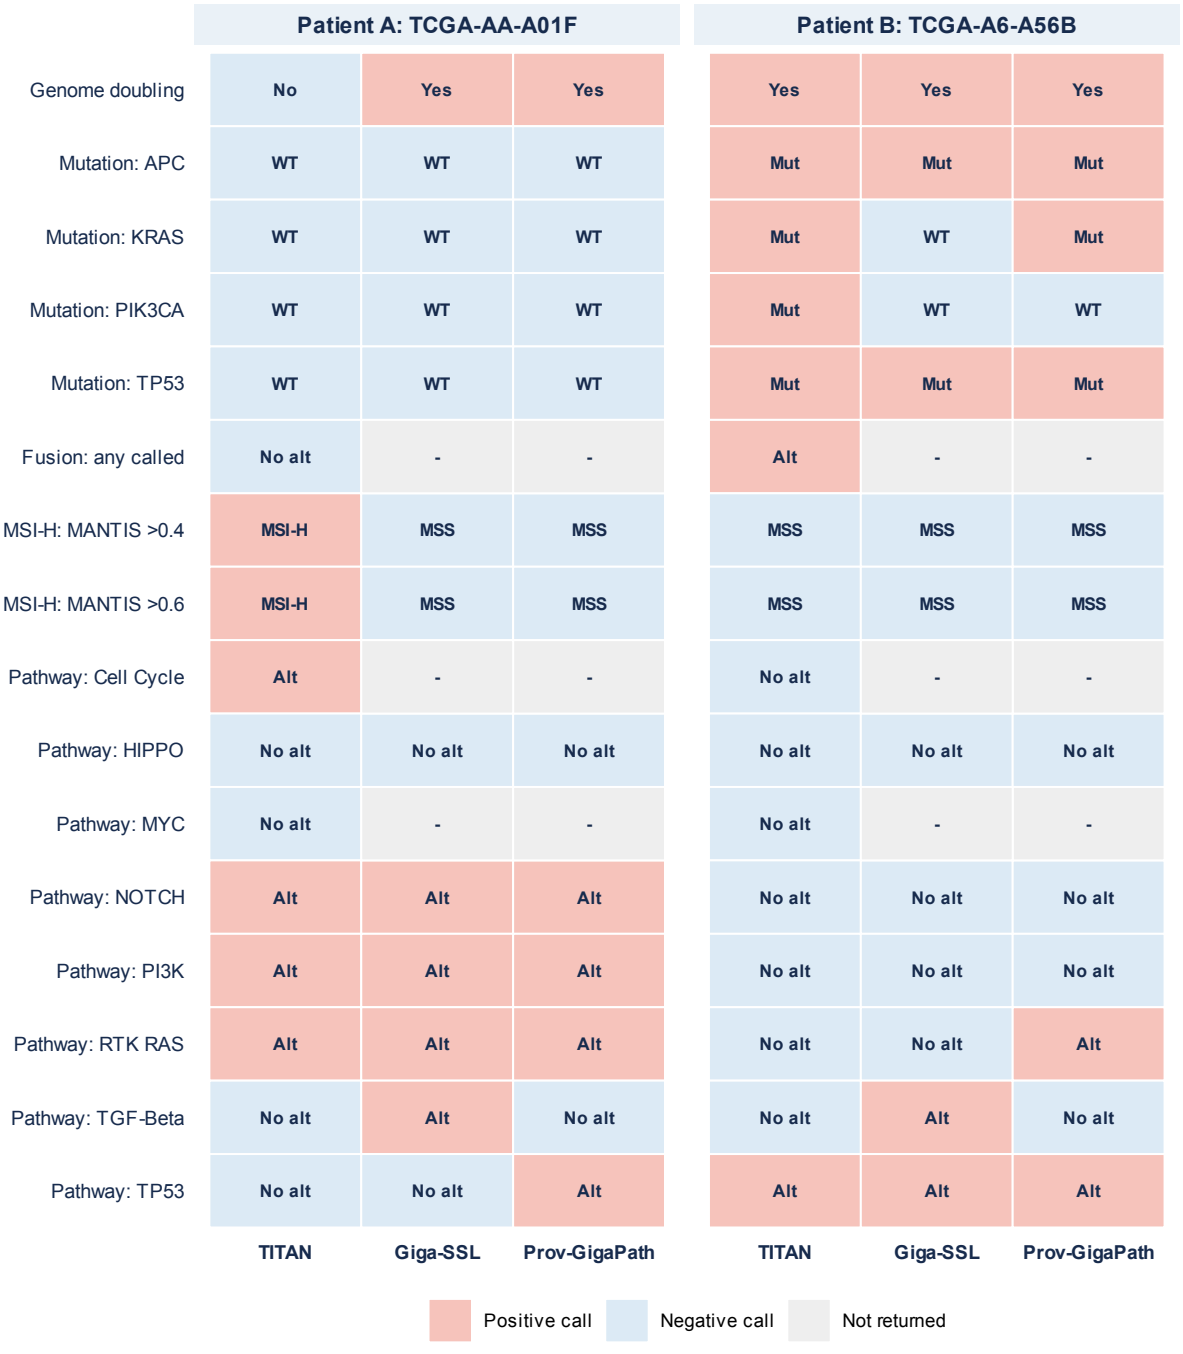
Binary calls for two COAD examples

Every returned cancer-specific endpoint across TITAN, Giga-SSL and Prov-GigaPath.
Mut/WT = mutation/wild type; Alt/No alt = altered/not altered; - = no returned model.



Research class calls from full-data TCGA fits; these patients are not held-out tests.
Original uncalibrated LDA scores and internal reference ranks, not probabilities, are in Additional files 2 and 3.
